Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                   ö
                                                     The invention provides a method for identifying or screening a nuclear factor kappa B (NF-kB) activation inhibitor by examining the effect of a test substance on modulating the function(s) of TGF-beta activated kinase I (TAK1). The NFkB activation inhibitors targeting on TAK1 can be used to treat or prevent autoimmune diseases (e.g. chronic rheumatoid arthritis), intractable diseases with inflammation (such as atrophic dermatrits and psoriasis), viral infection, endotoxin shock, septicemia and others. The present sequence represents the amino acid sequence of human TAK1c
                                                                                                                                                                                                                                                                                                                                                                              240

                                                                                                                                                      The present sequence represents human transforming growth factor-beta (TGF-beta) activated kinase, TAK-1. The DNA is used to produce the TAK-1 protein which is involved in the TGF-beta family signal transmission system TAK-1, also known as activator of MAPK Kinase (AMK-1), is an enzyme which is activated by TGF-beta and bone morphogenetic protein (BMP) and activates MAPK kinase by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            240

The NFkB activation inhibitors targeting on TAK1 can be used to treat or prevent autoimmune diseases (e.g. chronic rheumatoid arthritis), intractable diseases with inflammation (such as atrophic dermatitis and psoriasis), viral infection, endotoxin shock, septicemia and others. The present sequence represents the amino acid sequence of human TAK1a

                                                                                                                                                                                                                                                                                                                                                  S
                                                                                                                                                                                                                                                                                                                                                                                                                                                  A method has been developed for screening for substances which inhibit the binding of TAKI polypeptide to TABI polypeptide. The method comprises: (a) contacting the polypeptide in the presence of a sample; and (b) detecting the amount of bound polypeptide, in which the sample; can be pre-mixed with TAKI or TABI polypeptide first. The transforming growth factor (TGF)-beta inhibitory substances can be used in drugs for indications e.g. as TGF-beta signal transmission inhibitors or activators, or extracellular matrix protein production enhancement inhibitors or activators, or cell proliferation prevention inhibitors or activators, or bhysiological activity induction inhibitors or activators, or bhysiological activity induction inhibitors or activators, or myloid beta protein precipitation inhibitors or activators, or myloid beta protein precipitation inhibitors or activators, or anyloid beta protein precipitation inhibitors or activators, and such substances can also be inhibitors of the TAKI polypeptide function, particularly kinase
                                                                                                                                                                                                                                                                                                                                                                                   Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes a method for screening compounds for inhibition of inflammatory cytokine signal transduction by contacting the sample with TARI and its receptor TABI and selecting for inhibition of TARI/TABI binding. Also described is a method for screening compounds for thibition of inflammatory cytokine signal transduction in which the inhibitions of TARI phosphorylation is selected for; and drug compounds for the treatment of inflammatory disorders containing as active component an inflammatory cytokine signal transduction inhibitor. TARI is an essential component of the signalling process which results in release of inflammatory cytokines such as interleukin-1 (IL-1), IL-1), tumour necrosis factor (TMP) and IL-6. The methods can be used for the selection of effective antinflammatory agents. The present cerpresents human TAR-1, which is used in the exemplification of the present invention.

The invention relates to identifying pain-regulating substances (A) comprises (i) incubating a test substance with a cell (or preparation from it) that has synthesised a peptide or protein (B) and (ii) measuring either binding of the test substance to (B) or some functional parameter that is altered by this binding. The method is useful for identifying pain-regulating substances (A) with analgesic activity. (A) along with nucleic acid (ABL88411-ABL8841) that encode proteins (B) and agents nucleic acid; antibodies against (B); cells that express (B) and agents hat bind to (B), are all useful for treating pain, particularly chronic pain, including use in gene therapy. The same materials can also be used for diagnosis, e.g. of neurological and neurodegenerative diseases. The present sequence is that of a polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Identifying pain-regulating compounds, useful for treating chronic pain and for diagnosis, by measuring binding of compounds to specific
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AIKQIESESERKAFIVELRQLSRVNHPNIVKLYGACLNPVCLVMEYAEGGSLYNVLHGAE 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    PLPYYTAAHAMSWCLQCSQGVAYLHSMQPKALIHRDLKPPNLLLVAGGTVLKICDFGTAC 180

                                                                                                                                                                                            A method has been developed for screening for substances which inhibit CC the binding of TAKI polypeptide to TABI polypeptide. The method CC comprises: (a) contacting the polypeptide in the presence of a sample; CC and (b) detecting the amount of bound polypeptide, in which the sample (CC can be pre-mixed with TAKI or TABI polypeptide first. The transforming CC growth factor (TGF)-beta inhibitory substances can be used in drugs for indications e.g. as TGF-beta signal transmission inhibitors or activators, or extracellular matrix protein production enhancement CC inhibitors or activators, or cell proliferation prevention inhibitors or activators, or monocyte migration inhibitors or activators, or ccl immunosuppression inhibitors or activators, or monocyte migration inhibitors or activators, or cc immunosuppression inhibitors or activators, or amyloid beta protein precipitation inhibitors or activators, or amyloid beta protein contributors of the TAKI polypeptide function, particularly kinase activity. The present sequence represents TAKI-6xHis from an example of the manual protein contributors or activators.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       뫄
                                                                                  The invention provides a method for identifying or screening a nuclear factor kappa B (NF-kB) activation inhibitor by examining the effect of a test substance on modulating the function(s) of TGF-beta activated kinase 1 (TRKI). The NFkB activation inhibitors targeting on TAKI can be used to treat or prevent autoimmune diseases (e.g. chronic rheumatoid arthritis), intractable diseases with inflammation (such as atrophic dermatitis and psoriasis), viral infection, endotoxin shock, septicemia and others. The

```
The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell interactions -

The DNA is used to produce the TAK-1 protein which is involved in the TGF-beta family signal transmission system. TAK-1, also known as activator of MAPK Kinase (AMK-1), is an enzyme which is activated by TGF-beta and bone morphogenetic protein (BMP) and activates MAPK kinase by phosphorylation.

                                                                                                                                                                                                                                                                                                                 Protein identification; signal transduction pathway; metabolic hybridisation assay; genetic mapping; gene expression control;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABBS7737-ABB72072).
                                                                                                                                        09-MAR
                                                                                                                                                                                           25-FEB-2000;
                                                                                                                                                                                                                      06-SEP-2000.
                                                                                                                                                                                                                                                EP1033405-A2
                                                                                                                                                                                                                                                                            Arabidopsis
                                                                                                                                                                                                                                                                                                        termination

AH132943 to AAH37195 and AAG73514 to AAG77788 represent human colon cancer-associated mucleic acid molecules (N) and proteins (P), where the proteins are collectively known as colon cancer antigens. The colon cancer antigens have cytostatic activity and cancer antigens. The colon cancer antigens have cytostatic activity and can be used in gene therapy and vaccine production. N and P may be used in the prevention, diagnosis and treatment of diseases associated with imappropriate P associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing in a patient's genome that affect the patients own production of P. Additionally, N may be used to produce the colon cancer-associated Ps, by inserting the mucleic acids into a host cell and culturing the cell of coxpress the proteins. N and P can be used in the prevention, diagnosis and treatment of colorectal carcinomas and cancers. AAH37196 to AAH37204
